September 2024

Previously known as the Monthly Market Monitor.

TOP IDEAS 3
BONDS 18
EQUITIES 30
ALTERNATIVES 41
TRANSITION 47

The **BEAT**, previously known as the Monthly Market Monitor, provides connectivity between changing market events and implications for investor portfolios.

Spanning **Bonds, Equities, Alternatives and Transition***, this monthly review provides timely information across a broad array of markets and investment topics.

Each edition explores investment ideas, identifies areas of focus and provides a comprehensive outlook on asset allocation — all supported by a concise review of economic and asset class data through clear and impactful charts.

We believe The **BEAT** is a critical desk reference that enables more informed discussion and understanding of financial markets.

If you are viewing this book on your computer or tablet, **click or tap on the section box to jump to the beginning of each section.**

Data provided is for informational use only. See end of report for important additional information.

*Transition is an asset allocation view, which refers to cash, cash equivalents or liquid short-duration assets, such as short-dated Treasuries, that can be used to “transition” to other asset classes.

TOP IDEAS

Key Themes for September

**FEAR Framework: Speed Matters**

FEAR is a framework we use to understand the interplay between **F**ed policy, **E**mployment, **A**sset prices and **R**ates. A 5.5% Fed policy was designed to weaken employment and wage inflation in order to lower and anchor CPI. This is happening, but the market is fearful that the speed of job losses may trigger a recession. However, the increase of entrants into the labor market may be the reason the unemployment rate rose, not because people are quitting their jobs or getting laid off.

**Volatility vs. Market Fundamentals**

The volatility in markets may be telling us more about excesses in crowded market positions than economic fundamentals. The economy is certainly slowing, but we see this as a normalization of economic activity and the employment situation, more so than a collapse. However, this catalyzed a sudden exit from crowded positions in a very narrow market and caused volatility to spike. We do believe volatility should be elevated, but we do not believe its signal is particularly strong in calling for a hard landing due to the related technicals.

**Equities: Trading the Range . . . for Now**

We believe we are still in a secular bull market and our bias is to maintain positive tilts in our asset allocation. Our base case for a soft landing, which includes the possibility of a mild and short-lived recession, remains intact. Again, we see the cooling of the economy as a normalization of economic activity that brings with it a reset in market prices. This ultimately reduces the extreme narrowness of the S&P 500 and creates opportunities for broadening that includes large-cap value sectors. Inherent in this view is an expectation for overshoots both to the upside and the downside. This creates an opportunity for us to trade the range.

**Bond Yields Are Well-Priced for Rate Cuts**

Once again, **we believe bond yields are priced to perfection**. Bonds are priced for the Fed to cut interest rates by over 200 basis points (bps) by the end of 2025. While there may be some room for yields to move lower, we think it will take a hard landing or a deeper recession to see a material drop. We still believe that we are in a structurally higher inflation regime for years to come. Of course, inflation can fall from here, but we do not think it can fall below 2% for a material period of time. Instead, we think it bounces off that level. As a result, bond yields should trade with a spread above a terminal Fed Funds level of, say around 3.50%. This is why we think declines in bond yields are limited.

The views and opinions expressed are those of the Portfolio Solutions Group at the time of writing of this presentation and are subject to change at any time due to market, economic, or other conditions, and may not necessarily come to pass. Not to be construed as an investment or research recommendation.

TOP IDEAS

The Portfolio Solutions Group – Our Top 4 Ideas for September

Downgrading Loans to Neutral, Keeping HY Overweight

Moving loans to Neutral from OW. The market is pricing 200 bps of rate cuts over the next year and possibly further cuts by the end of 2025. The yield in loans floats with short-term rates and will fall as the Fed cuts. This decline in yield, relative to the credit quality associated with loans, makes this asset class less attractive. By comparison, HY is a higher quality asset, mainly BB rated, and has higher interest coverage ratios and EBITDA margins. With these other factors in mind, we think it's worthwhile to rebalance loans to Neutral from OW.

Equities: The Worst of Times, The Best of Times

Taking advantage of volatility. We believe the equity market is in a secular bull market and see corrections as an opportunity to buy. As a result, we added to equity exposure in August during weakness. But at the same time, we still believe the economy is cooling into a soft landing. As such, we believe the market can overshoot to the upside as well and is the reason we sold equity exposure and returned to Neutral later in August. We do not believe the economy is set to accelerate over the next few months, which makes the S&P 500 around 5650 our near-term upper bound. At the same time, the economy is not collapsing, which makes 5200 attractive and 5350 seem fair. We plan to trade around the ranges.

Japanese Equities: Maintain Overweight

Japanese equities are in a correction, not the start of a bear market. Japan remains a structural overweight in terms of equity exposure. Many of the factors that brought us to this conclusion are still intact. Namely, we see Japan in a structural recovery that will be supported by policy and favorable corporate governance. Japan will certainly go through corrections as we've seen, but we do not yet have a full position on and will use those corrections to increase exposure. Policy makers seem supportive of growth and will risk modestly higher inflation to achieve it. Tailwind from JPY (yen) weakness is likely past the cycle peak, but we expect a manageable pace of currency appreciation.

Moving Duration to Underweight

Bond yields are well-priced for rate cuts. Market expectations are priced for Fed rate cuts of over 200 bps by the end of 2025, which may represent the full rate cutting cycle. If we assume that policy rates fall to 3.5%, U.S. Treasuries (USTs) trade with a spread over Fed funds and the curve steepens – as is common after a rate cutting cycle – then bond yields around 4% and below seem fully priced especially in our base case for a soft landing. As a result, we believe that bond returns from duration are limited, thus our move to shorten duration. One should expect returns to reflect the coupon level of bonds, which keeps us interested in spread products.

TOP IDEAS

Not All Increases in the Unemployment Rate Are Created Equal

Higher immigration levels may be supporting a higher labor force participation rate, which in turn would contribute to a higher reported unemployment rate. From this perspective, a higher unemployment rate is not signalling weakness but rather an increase in the labor supply that would help bring inflation down without affecting growth.

Immigrant Visas Remain Near Record-high Levels

The views and opinions expressed are those of the Portfolio Solutions Group at the time of writing/of this presentation and are subject to change at any time due to market, economic, or other conditions, and may not necessarily come to pass. Forecasts/estimates are based on current market conditions, subject to change, and may not necessarily come to pass.

TOP IDEAS

Unemployment Is Still Far from Distressed Levels

Labor market measures that focus on job losses are starting to pick up but are still far from levels that signal distress. As shown, Job Losers (LHS) and Layoffs metrics (RHS) are still low. Given the distortions of this cycle, these measures might be a more accurate tool to measure recession risks compared to a top-line unemployment rate.

The Numbers of Individuals Being Made Redundant in the U.S. Remains Low

Forecasts/estimates are based on current market conditions, subject to change, and may not necessarily come to pass.

TOP IDEAS

A New Industrial Renaissance in the U.S.

Government policies such as the CHIPS Act, the Inflation Reduction Act (IRA) and the Infrastructure Act are sponsoring growth in many areas of U.S. manufacturing. These trends could offer through-the-cycle structural support to areas of the economy that are traditionally very cyclical.

After Decades of Decline, U.S. Government Policies Have Triggered a Turnaround in Manufacturing Capacity

Forecasts/estimates are based on current market conditions, subject to change, and may not necessarily come to pass.

TOP IDEAS

Second Quarter Earnings Suggest a Still Healthy Macro Backdrop

Earnings surprise data for the second quarter were solid, suggestive of a still healthy macro backdrop. The net of positive less negative EPS surprise ranks in the top quintile of a ten-year history. Sales surprise ranks lower relative to history, but this gap likely speaks to disinflation, with the opposite having occurred when inflation accelerated.

S&P 500 Surprise Data Were Solid with Disinflation Explaining the EPS vs Sales Gap

The views and opinions expressed are those of the Portfolio Solutions Group at the time of writing/of this presentation and are subject to change at any time due to market, economic, or other conditions, and may not necessarily come to pass. Forecasts/estimates are based on current market conditions, subject to change, and may not necessarily come to pass. SOFR stands for Secured Overnight Financing Rate. **Past performance is no guarantee of future results.**

TOP IDEAS

Moving to Underweight on Duration

The market has priced for 100 basis points (bps) in Fed rate cuts by end of 2024 and over 200 bps by the end of 2025. We think this looks aggressive unless the U.S. economy has a hard landing, but this is not our base case. Bond yields at 4% and below look fully-priced given our soft-landing central scenario.

More than 200 bps of Rate Cuts Are Priced in by End 2025

Implied number of Fed cuts priced in

Risk/Reward for Duration Looks Unattractive at Current Levels

10-year Treasury term premium (ACM model)

Forecasts/estimates are based on current market conditions, subject to change, and may not necessarily come to pass. The Adrian, Crump, and Moench (ACM) model provides an approach for extracting term premia from Treasury yields. **Past performance is no guarantee of future results.**

TOP IDEAS

Equities: Backdrop Still Constructive, but Positioning Should Be Opportunistic

Our central scenario of stable or mildly decelerating growth remains a constructive backdrop for risk assets, but our optimism is constrained to a degree by the absence of excess risk premium in equities. Within this environment, we look to be opportunistic, taking advantage of overshoots both to the upside and the downside.

TOP IDEAS

Capital Markets Investment Framework

Representative Allocations from the Portfolio Solutions Group

Asset Allocation	Our View					Commentary
	--	-	=	+	++	
Bonds						
Duration		■	←			With the repricing of further rate cuts and subsequent downward move in longer term yields, we are shifting to a more firmly UW duration position. In the U.S., for example, we believe the 8 rate cuts priced in over the next year (8 Fed meetings) are too many given our view that the economic backdrop is normalizing rather than collapsing, and yields across the curve have room to rise considering. The picture in Europe is not too different. Our preferred OW expressions continues to be within global credit, namely High Yield, EM Debt and ABS.
Credit				■		
Equities						
Risk Level			■			The sell-off in risk assets in early August created a tactical, sentiment-driven opportunity to add to equities. As a result, we briefly increased our OW to equities over the month. However, the speed of the rebound led us to pullback our overall risk level to Neutral by month-end.
Alternatives						
Private Markets			■			While the repricing of private assets in response to higher financing costs continues, we have increased confidence in entry prices for private equity and real estate. We expect fundraising and deployment to recover as M&A rebounds, leading to an opportunity to deploy capital. In private credit, interest levels on new loans have moderated, but special situations strategies with flexibility have been able to maintain relatively attractive pricing. Hedge funds delivered attractive risk-adjusted performance in the first half of 2024 and their positioning suggests confidence in the opportunities for skill-based returns. We remain optimistic with respect to alpha generation.
Hedge Funds				■		
Commodities			■			
Transition						
Cash/Short Duration			→	■		We have increased our short duration weight and are using a barbell approach with other segments of the credit market to create a higher-yielding strategy.

TOP IDEAS

Global Fixed Income

Representative Positioning from Portfolio Solutions Group

Fixed Income	Our View					Commentary
	--	-	=	+	++	
Bonds						
U.S.-Treasury		█	█	←		The U.S. rates market is pricing a much more dire economic scenario than credit or equities. Our view lies much closer to credit and equities, even if some of those markets seem slightly overoptimistic.
Inflation Linked Bonds			█	█		With U.S. 10-year breakeven inflation rates right around 2%, and real rates around 1.80%, we see some value in TIPS relative to nominal treasuries over the medium term.
Eurozone Govt. Bonds		█	█	←		Like the U.S., eurozone bonds have rallied substantially. At the same time, consensus growth forecasts for 2025 and 2026 appear higher than estimates of long-run potential GDP growth.
EM Hard Currency Govt. Bonds				█	█	We expect EM growth to slow in 2H.24; rates vol is at risk of trending higher. However, a minor deterioration in both factors should result in only limited spread widening i.e. positive excess returns.
EM Local Currency Govt. Bonds			█	█		The rally in U.S. yields and weaker USD has led to a strong rally in EM Local, with the GBI index up over 5% since end of June. Over the near term we question how long this environment can continue. If the Fed surprises on the dovish side, it may be for reasons that trigger a flight to quality in the USD.
Public Credit						
Municipal Bonds				█	█	Our previous downgrade of Munis appears to have been well timed as the asset class has cheapened relative to USTs. We now believe Munis offer compelling value for taxable investors.
Investment Grade	█					UW investment grade corporate bonds. Spreads are at historical tights. Excess return over USTs should be minimal and IG remains sensitive to left-tail outcomes leading to a highly asymmetrical return profile.
MBS/ABS					█	High conviction in asset backed securities and yield per unit of credit quality remains attractive. U.S. 30-year fixed mortgage rates are higher than BB corporate yields, a rare occurrence in 25 years.
High Yield				█	█	High yield spreads have retraced most of their move since the early August selloff, however fundamentals remain strong and thus potential credit risk premium appears relatively attractive.
Bank Loans			█	█	←	Once adjusted for the forward curve and ratings differentials, bank loans look slightly less attractive than High Yield. Furthermore, bank loans often see outflows during rate cutting cycles.

Global Equity

Representative Positioning from Portfolio Solutions Group

■ Current allocation
← Change from previous
 -- High conviction underweight
 - Underweight
 = Neutral
 + Overweight
 ++ High conviction overweight

Equity	Our View					Commentary
	--	-	=	+	++	
Regional						
<i>Developed Markets</i>						Neutral U.S. equities as valuations have almost retraced back to YTD highs (~21.3x) and consensus expectations for sales and margin growth are already very optimistic. If we overlay rate cuts in a soft-landing scenario, our expectation is for the index to remain range bound.
U.S.						We remain OW European equities via specific segments of the market where the risk/return skew is favourable due to structural changes (European banks) or due to idiosyncratic events creating an attractive opportunity (French equities).
Eurozone						Japan's structural tailwind from reflation and corporate governance reforms remain intact. While cyclical tailwinds from yen weakness are diminishing, we do not expect this to turn into a meaningful headwind. Investor sentiment and relative valuations have reset lower amid still resilient corporate fundamentals.
Japan						The absence of a DM hard landing and easing financial conditions are supportive for EM in general. Structural concerns persist for China, coupled with lack of policy catalysts and sustainable earnings improvement kept us on the sidelines.
<i>Emerging Markets</i>						
Style						
Growth vs. Value					←	Quality is a better representation of our view than either Growth or Value. Growth carries greater concentration and valuation risk, while Value outperformance requires stronger cyclical growth.
Quality						With little excess risk premium in equities and a limit to economic growth acceleration due to inflation risk, we continue to prefer a tilt toward Quality. We balance with selective cyclical exposure.
Large Cap vs. Small Cap						The window for small cap outperformance is too narrow – requiring “Goldilocks” growth and inflation
Dividend						We see balanced risk for Dividend yield style exposures. High dividend yield as an independent style factor does not imply quality, though many dividend focused funds also seek quality factors.

For informational purposes and does not constitute an offer or a recommendation to buy or sell any particular security or to adopt any specific investment strategy. TOP IDEAS

Alternatives

Representative Positioning from Portfolio Solutions Group

Alternative Assets	Commentary
Private Markets	
Private Equity	The industry level repricing represents a potentially compelling entry point into private equity . However, the operating environment suggests that lower valuations are necessary but not sufficient for attractive forward-looking returns. Private equity sponsors also need a competitive tool kit to pursue revenue growth initiatives, margin expansion and suitable capital structures, potentially with organic growth playing a larger roll relative to inorganic growth within an environment of higher debt service costs and lower leverage multiples. We believe high quality small and middle market managers with operational expertise will be well-placed to deliver attractive returns under these conditions.
Private Real Assets	<p>Commercial real estate has continued to reprice meaningfully, with the core real estate benchmark experiencing its sixth consecutive negative quarter. This has been driven by higher debt costs and pockets of elevated supply. A significant amount of commercial real estate debt is expected to mature this year, expected to drive higher transaction volumes with attractive entry valuations. Long-term demand tailwinds in key sectors remain and are expected to combine with improved pricing to represent a compelling opportunity.</p> <p>Private infrastructure is benefiting from the tailwinds of two mega trends; digitization of society and economies, and the energy transition. Investment opportunities are expanding and accelerating due to the developments in generative AI, as the power market is currently inadequate to satisfy the volume and density requirements of generative AI, but also the low tolerance for intermittency that is increasing as renewables grow as a proportion of the overall power mix.</p>
Private Credit	<p>Private loan pricing, terms and defaults are generally now in line with long-term averages, allowing private credit to contribute to overall portfolio construction with return expectations aligned with historical levels. As corporations continue to adjust to higher interest rate expense, the supply of performing but non-conforming opportunities for special situations lenders is growing and offers attractive pricing.</p>
Liquid Alternatives	
Hedge Funds	Bottom-up fundamental security selection and trend following are both benefiting from higher return dispersion and lower cross correlations in asset performance, as well as benefitting from higher cash returns. Portfolio positioning shows hedge funds have relatively high conviction in the current opportunities for skill-based returns.
Commodities	We are neutral on key Commodity Markets : while a rebound in manufacturing activity is supportive of commodity demand, high OPEC spare capacity and generally healthy supply from non-OPEC countries should keep oil prices capped for the time being.

For informational purposes and does not constitute an offer or a recommendation to buy or sell any particular security or to adopt any specific investment strategy. Terms

Municipal-to-Treasury Yield Ratios are relative value indicators that measure the richness or cheapness of Municipal bond yields to comparable maturity Treasury bond yields.

Yield to Worst is a measure which reflects the lowest potential yield earned on a bond without the issuer defaulting. The yield to worst is calculated by making worst-case scenario assumptions by calculating the returns that would be received if provisions, including prepayment, call or sinking fund, are used by the issuer.

About Risk

Bank Loans – There can be no assurance that the liquidation of collateral securing an investment will satisfy the issuer's obligation in the event of non-payment or that collateral can be readily liquidated. The ability to realize the benefits of any collateral may be delayed or limited. **Commodities** – The value of commodities investments will generally be affected by overall market movements and factors specific to a particular industry or commodity including weather, embargoes, tariffs, or health, political, international and regulatory developments. **Credit** – Investments in income securities may be affected by changes in the creditworthiness of the issuer and are subject to the risk of non-payment of principal and interest. The value of income securities also may decline because of real or perceived concerns about the issuer's ability to make principal and interest payments. **Duration** – Securities with longer durations tend to be more sensitive to interest rate changes than securities with shorter durations. **Equity** – Equity investment values are sensitive to stock market volatility. **Foreign** – Investments in foreign instruments or currencies can involve greater risk and volatility than U.S. investments because of adverse market, economic, political, regulatory, geopolitical, or other conditions. In emerging countries, these risks may be more significant. **Gov't Agency** – While certain U.S. Government-sponsored agencies may be chartered or sponsored by acts of Congress, their securities are neither issued nor guaranteed by the U.S. Treasury. **Income Market** – An imbalance in supply and demand in the income market may result in valuation uncertainties and greater volatility, less liquidity, widening credit spreads and a lack of price transparency in the market. There generally is limited public information about Municipal issuers. **Inflation-Linked** – Interest payments on inflation-linked securities may vary widely and will fluctuate as principal and interest are adjusted for inflation. Investments in inflation-linked securities may lose value in the event that the actual rate of inflation is different than the rate of the inflation index. **Interest Rate** – As interest rates rise, the value of certain income investments is likely to decline. The London Interbank Offered Rate or LIBOR, is used throughout global banking and financial industries to determine interest rates for a variety of financial instruments (such as debt instruments and derivatives) and borrowing arrangements. The ICE Benchmark Administration Limited, the administrator of LIBOR, is expected to cease publishing certain LIBOR settings on December 31, 2021, and the remaining LIBOR settings on June 30, 2023. The transition process may involve, among other things, increased volatility or illiquidity in markets for instruments that currently rely on LIBOR, such as floating-rate debt obligations. **Lower-Rated** – Investments rated below Investment Grade (typically referred to as "junk") are generally subject to greater price volatility and illiquidity than higher rated investments. **Maturity** – Longer-term bonds typically are more sensitive to interest rate changes than shorter-term bonds. **Preferred Stocks** – When interest rates rise, the value of preferred stocks will generally decline. **Prepayment - MBS** – Mortgage-backed securities are subject to prepayment risk. **Prepayment - Bank Loan** – Bank Loans are subject to prepayment risk. **Real Estate** – Changes in real estate values or economic downturns can have a significant negative effect on issuers in the real estate industry, including REITs.

ADDITIONAL INFORMATION

Risk Considerations

Diversification does not eliminate the risk of loss.

In general, equity securities' values also fluctuate in response to activities specific to a company. Investments in foreign markets entail special risks such as currency, political, economic, and market risks. The risks of investing in emerging market countries are greater than risks associated with investments in foreign developed countries. Fixed income securities are subject to the ability of an issuer to make timely principal and interest payments (credit risk), changes in interest rates (interest-rate risk), the creditworthiness of the issuer and general market liquidity (market risk). In a rising interest-rate environment, bond prices may fall and may result in periods of volatility and increased portfolio redemptions. In a declining interest-rate environment, the portfolio may generate less income. Longer-term securities may be more sensitive to interest rate changes. Alternative investments are speculative, involve a high degree of risk, are highly illiquid, typically have higher fees than other investments, and may engage in the use of leverage, short sales, and derivatives, which may increase the risk of investment loss. These investments are designed for investors who understand and are willing to accept these risks. Performance may be volatile, and an investor could lose all or a substantial portion of its investment.

There is no guarantee that any investment strategy will work under all market conditions, and each investor should evaluate their ability to invest for the long-term, especially during periods of downturn in the market.

A separately managed account may not be appropriate for all investors. Separate accounts managed according to the Strategy include a number of securities and will not necessarily track the performance of any index. Please consider the investment objectives, risks and fees of the Strategy carefully before investing. A minimum asset level is required.

For important information about the investment managers, please refer to Form ADV Part 2.

The views and opinions and/or analysis expressed are those of the author or the investment team as of the date of preparation of this material and are subject to change at any time without notice due to market or economic conditions and may not necessarily come to pass. ADDITIONAL INFORMATION

ASIA PACIFIC

Hong Kong: This material is disseminated by Morgan Stanley Asia Limited for use in Hong Kong and shall only be made available to “professional investors” as defined under the Securities and Futures Ordinance of Hong Kong (Cap 571). The contents of this material have not been reviewed nor approved by any regulatory authority including the Securities and Futures Commission in Hong Kong. Accordingly, save where an exemption is available under the relevant law, this material shall not be issued, circulated, distributed, directed at, or made available to, the public in Hong Kong. **Singapore:** This material is disseminated by Morgan Stanley Investment Management Company and should not be considered to be the subject of an invitation for subscription or purchase, whether directly or indirectly, to the public or any member of the public in Singapore other than (i) to an institutional investor under section 304 of the Securities and Futures Act, Chapter 289 of Singapore (“SFA”); (ii) to a “relevant person” (which includes an accredited investor) pursuant to section 305 of the SFA, and such distribution is in accordance with the conditions specified in section 305 of the SFA; or (iii) otherwise pursuant to, and in accordance with the conditions of, any other applicable provision of the SFA. This publication has not been reviewed by the Monetary Authority of Singapore. **Australia:** This material is provided by Morgan Stanley Investment Management (Australia) Pty Ltd ABN 22122040037, AFSL No. 314182 and its affiliates and does not constitute an offer of interests. Morgan Stanley Investment Management (Australia) Pty Limited arranges for MSIM affiliates to provide financial services to Australian wholesale clients. Interests will only be offered in circumstances under which no disclosure is required under the Corporations Act 2001 (Cth) (the “Corporations Act”). Any offer of interests will not purport to be an offer of interests in circumstances under which disclosure is required under the Corporations Act and will only be made to persons who qualify as a “wholesale client” (as defined in the Corporations Act). This material will not be lodged with the Australian Securities and Investments Commission.

Japan: For professional investors, this material is circulated or distributed for informational purposes only. For those who are not professional investors, this material is provided in relation to Morgan Stanley Investment Management (Japan) Co., Ltd. (“MSIMJ”)’s business with respect to discretionary investment management agreements (“IMA”) and investment advisory agreements (“IAA”). This is not for the purpose of a recommendation or solicitation of transactions or offers any particular financial instruments. Under an IMA, with respect to management of assets of a client, the client prescribes basic management policies in advance and commissions MSIMJ to make all investment decisions based on an analysis of the value, etc. of the securities, and MSIMJ accepts such commission. The client shall delegate to MSIMJ the authorities necessary for making investment. MSIMJ exercises the delegated authorities based on investment decisions of MSIMJ, and the client shall not make individual instructions. All investment profits and losses belong to the clients; principal is not guaranteed. Please consider the investment objectives and nature of risks before investing. As an investment advisory fee for an IAA or an IMA, the amount of assets subject to the contract multiplied by a certain rate (the upper limit is 2.20% per annum (including tax)) shall be incurred in proportion to the contract period. For some strategies, a contingency fee may be incurred in addition to the fee mentioned above. Indirect charges also may be incurred, such as brokerage commissions for incorporated securities. Since these charges and expenses are different depending on a contract and other factors, MSIMJ cannot present the rates, upper limits, etc. in advance. All clients should read the Documents Provided Prior to the Conclusion of a Contract carefully before executing an agreement. This material is disseminated in Japan by MSIMJ, Registered No. 410 (Director of Kanto Local Finance Bureau (Financial Instruments Firms)), Membership: the Japan Securities Dealers Association, The Investment Trusts Association, Japan, the Japan Investment Advisers Association and the Type II Financial Instruments Firms Association.
